# WK1 Technical Data

**Caring Beyond Our Products** 

## Controller WK1 (item #9011)

Protection: Mounting: Supply voltage Ub: Power draw: Output current load: Temperature range: TEST signal input: TEST input resistance : IP20 EN rail (DIN rail) 20-28VDC/15-22VAC .25-.45A (output at .1A) 100mA maximum(solid state) 0° to +50°C (32° to 122°F) 8 to 28VDC 4K7

### Important to know:

The WK1 system is on order status and is replaced with the WK2.

The WK1 from Middex allows a PLC to take control of the duration of the output signals. As long as the TEST signal is active, the resulting outputs remain high. Once the TEST signal drops, the output signals drop as well. The WK1 outputs are protected. Therefore outputs from several units may be combined to a single input at the PLC. However, only the NOT OK outputs should be combined, since a single unit detecting a broken tool will trigger a machine stop. Combining OK signals does not work as only one unit would be needed with an OK signal to continue the machining cycle.

## **Typical cycle times**

Scanning angle 45°:	300ms
Scanning angle 90°:	400ms
Scanning angle 180°:	600ms
